Introduction to predictive analytics 1

01 How can predictive analytics help your business? 4

Introduction 4

What is predictive analytics? 4

The analytical model 6

'All models are wrong, but some are useful' 8

Two types of model – predictive and descriptive 8

The profitability seesaw 12

Applying predictive analytics to e-mail marketing 13

Making a difference – eight examples of useful models 13

Generating customer knowledge 18

Competing on analytics 18

Data protection and privacy issues 19

Conclusion 20

Notes 21

02 Using data mining to build predictive models 22

Introduction 22

What is data mining? 22

Who are the stakeholders? 23

The data-mining process 24

Involvement of the stakeholders 32

The relationship between data mining, data science
and statistics 33

Conclusion 34

03 Managing the data for predictive analytics 35

Introduction 35

The roles of data 35

The useful data for predictive analytics 37

Data sources that can be leveraged 40

Having the right data 45

Types of data – structured and unstructured 46

Data quality checks – the data audit 47

Data preparation 50

Conclusion 56

04 The analytical modelling toolkit 57

Introduction 57

Types of techniques 57

Widely used predictive models 58

Widely used descriptive methods 67

The Bayesian approach 80

Which is the right technique to use? 82

Combining models together 82

Conclusion 83

05 Software solutions for predictive analytics 85

Introduction 85

The architecture required for data mining 86

Software for analytical modelling 88

Communicating models between development
and deployment 93

Model management 95

Scalable analytics in the Cloud 96

Conclusion 97

06 Predicting customer behaviour using analytical models 99

Introduction 99

Overview – building and deploying predictive models 99

Defining the business requirements 101

Framing the business problem 102

The timelines for model development and deployment	103
The sample size required	105
Preparing the analytic dataset	107
Building the model	108
Assessing model performance	111
Planning model deployment	116
From testing to implementation	118
Conclusion	118

07 Predicting lifetimes – from customers to machines 120

Introduction	120
Importance of the customer lifecycle	120
Survival analysis applications	121
Key concepts of this technique	122
Describing customer lifetimes	125
Predicting survival times	128
Applications to customer management	131
Differences between survival and churn models	132
Applications to asset management	132
Conclusion	139

08 How to build a customer segmentation 141

Introduction	141
Principles of segmentation	142
Potential business applications	142
Steps in developing and implementing customer segmentation	143
Some useful segmentation approaches	151
Conclusion	161

09 Accounts, baskets, citizens or businesses – applying predictive analytics in various sectors 162

Introduction	162
Applications in retail banking	162
Analytics in mobile telecoms	166
Customer analysis in retail	167
Use of advanced analytics in the public sector	170
Analysing businesses	176
Conclusion	179

- 10 From people to products – using predictive analytics in retail 180**
- Introduction 180
 - An overview of retail applications 180
 - Price optimization 182
 - Markdown pricing 188
 - Forecasting base demand 192
 - Conclusion 196
- 11 How to benefit from social network analysis 197**
- Introduction 197
 - Analysing social networks of customers 198
 - Business applications of SNA 202
 - Applying SNA to learn more about customers 203
 - Extending network analysis to social media 204
 - Conclusion 206
- 12 Testing the benefits of predictive models and other marketing effects 207**
- Introduction 207
 - The purpose of testing 208
 - Golden rules 209
 - Planning a marketing test 210
 - Advanced experimental design 218
 - Constructing and running the test 221
 - Analysing test results 223
 - Testing in the online world 229
 - Conclusion 230
- 13 Top tips for gaining business value from predictive analytics 232**
- Introduction 232
 - Reprise of main messages 232
 - Final tips 237
 - Conclusion 238
- Bibliography 241*
- Index 247*
